Q1. How many different candy types are in this dataset?	3
85 different candy types	3
Q2. How many fruity candy types are in the dataset?	3
38 fruity candy types	4
2. What is your favorite candy?	4
Q3. What is your favorite candy in the dataset and what is it's winpercent value? .	4

Winpercent looks to be on a different scale.	13
Q7. What do you think a zero and one represent for the candy\$chocolate column? .	13
Zero represents that this candy is not a chocolate candy (0=no chocolate), and one represents that it is a chocolate candy (1=yes chocolate)	13
Q8. Plot a histogram of winpercent values	13
Q9. Is the distribution of winpercent values symmetrical?	15
No, it is slightly skewed to the left.	15
Q10. Is the center of the distribution above or below 50%?	15
Below	15
Q11. On average is chocolate candy higher or lower ranked than fruit candy?	15
On average, chocolate candy is higher ranked than fruit candy.	15
Q12. Is this difference statistically significant?	16
Yes, this difference is significantly different as indicated by the p-value < 0.05.	16

5 Exploring the correlation structure	35
Q22. Examining this plot what two variables are anti-correlated (i.e. have minus values)?	36
Fruity and chocolate	36
Q23. Similarly, what two variables are most positively correlated?	36
Winpercent and chocolate	36
6. Principal Component Analysis	36
Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?	41

```

Q9. Is the distribution of winpercent values symmetrical?

No, it is slightly skewed to the left.

Q10. Is the center of the distribution above or below 50%?

Below

Q11. On average is chocolate candy higher or lower ranked than fruit candy?

```
mean(candy$winpercent[as.logical(candy$chocolate)])

Q12. Is this difference statistically significant?

```
t.test(candy$winpercent[as.logical(candy$chocolate)], candy$winpercent[as.logical(candy$fr
```

Welch Two Sample t-test

```
data: candy$winpercent[as.logical(candy$chocolate)] and candy$winpercent[as.logical(candy$fr

4. Taking a look at pricepercent

```
library("ggrepel")

#how about a plot of price vs win
ggplot(candy) + aes(winpercent, pricepercent, label=rownames(candy)) +
  geom_point(col=my_cols) +
  geom_text_repel(col=my_cols, size=3.3, max.overlaps=5)
```

Warning: ggrepel: 65 unlabeled data points (too many overlaps). Consider increasing max.overlaps

Q19. Which candy type is the highest ranked in terms of winpercent for the least money - i.e. offers the most bang for your buck?

Fruity candies are generally the best bang for your buck. Reese's miniatures is the best bang for your buck more specifically.

Q20. What are the top 5 most expensive candy types in the dataset and of these which is the least popular?

```
exp <- candy %>% arrange(desc(pricepercent)) %>% head(5)
exp %>% arrange(winpercent)
```

Most expensive: Nik L Nip, Ring pop, Nestle Smarties, Hershey's Milk, Hershey's Krackel

Of these, Nik L Nip is the least popular.

5 Exploring the correlation structure

```
#install.packages("corrplot")
library("corrplot")
```

corrplot 0.92 loaded

```
cij <- cor(candy)
corrplot(cij)
```

Q22. Examining this plot what two variables are anti-correlated (i.e. have minus values)?

Fruity and chocolate

Q23. Similarly, what two variables are most positively correlated?

Winpercent and chocolate

6. Principal Component Analysis

Need to scale our PCA plot, otherwise winpercent will dominate everything.

The main function that is always there for us is “prcomp()”. It has an important argument that is set to “scale=FALSE”.

```
pca <- prcomp(candy, scale=TRUE)
summary(pca)
```

Q24. What original variables are picked up strongly by PC1 in the positive direction? Do these make sense to you?

Fruity, hard, and pluribus. These make sense as fruity candies often come in packs of multiple candies and are often hard.
